STRATEGY HOUSE GREEN

VISION STATEMENT 2030

2030

To be a centre of excellence for energy transition
to carbon neutral rural & urbanized areas

ENERGY SYSTEMS

The **decarbonisation** of the energy system requires an **increasing level of integration** between its various components. Today, network operation and planning, market design, and regulatory provisions are developed separately by type of energy carrier.

Sector integration means linking the various energy carriers - electricity, heat, cold, gas, solid and liquid fuels - with each other and with the end-use sectors, such as buildings, transport or industry. Linking sectors will allow the optimisation of the energy system as a whole, rather than decarbonising and making separate efficiency gains in each sector independently.

SUSTAINABLE BUILDINGS & DISTRICTS

The **construction sector plays a key role in the shift towards a low-carbon economy**. The construction industry's transformation towards more sustainability can be solved optimising individual buildings, but also and especially whole districts.

Sustainable construction means building with renewable and recyclable resources and materials. During construction projects, care must be taken to reduce waste and energy consumption where possible and protect the natural environment around the site. The end result of a sustainable construction project must be an environmentally friendly building or environment.

WATER TECHNOLOGIES

The **proper and efficient management of water resources** is one of the most **important challenges for pursuing environmental sustainability and decarbonisation goals**. Modern water management requires an integrated approach that combines the different needs of use (human, agricultural and industrial) with those of the natural ecosystem, as well as the introduction of multiple use of water.

Water Technologies means all those techniques solutions and knowledge that make it possible to enhance, preserve and monitor the quantity and quality of the water resource, as well as to treat it after use, in order to return it safely to the environment.

FOOD & HEALTH

STRATEGY HOUSE FOOD & HEALTH

VISION STATEMENT 2030

2030

Pioneering food innovation
and foster a holistic health approach

RAW MATERIALS & BY-PRODUCTS

High-quality raw materials are the foundation of high-quality products. The selection of suitable **raw materials** depends on technologies to determine, exploit and enhance their composition.

The utilization of **by-products (secondary raw materials)** creates an additional source of functional compounds and increases the sustainability of the food chain.

OPTIMAL PROCESSING & FERMENTATION

Valuable ingredients and attributes need to be **exploited** and **preserved**. **Optimal processing methods** pave the way to preserve and accentuate the organoleptic and health properties of food.

Fermentation is a vital technology to optimize sensorial, nutritional and functional food attributes.

OMICS & PRECISION HEALTH

Omics technologies enable important food and health science applications, opening the door for new products and solutions.

We offer all-encompassing services and develop new **precision health solutions** in a real-world, dynamic research environment.

VISION STATEMENT 2030

DIGITAL

STRATEGY HOUSE DIGITAL

VISION STATEMENT 2030

2030

Establish the digital backbone
to enable smart green regions.

IOT (INTERNET OF THINGS) DATA COLLECTION

IoT and Edge Computing create an environment in which micro-computers are all around us. This transforms the way computation is done, more on the edge or in the fog. New challenges like "OTA Programming Strategies", "Cyber-Security Risk Mitigation" and "Blockchain" will become key for a sustainable digital environment.

OPEN DATA HUB DATA SHARING AND COMMUNITY

Software Development is rapidly changing, topics like Agile Software Development, Continuous Compliance, Licensing, ... require a strong competence in Open Source, Open Standards and Open Data to connect as many systems as possible and to open up data silos. Enabling the involved companies and research institutions to gain visibility and increase the ROI for their I&R&D activities.

AI (ARTIFICIAL INTELLIGENCE) DATA PROCESSING

Hyperconnected Services enable new Business Models like XaaS, everything as a service. MaaS is already in development and deep learning will change how users will be involved in the customer journey.

WP4
WORKING AND LIVING
IN SMART ALPINE AREAS

WP5
SMART
MANUFACTURING

Application of a digital business model complementary to the existing manufacturing business model.

Improve the reconfigurability, real-time response, self-organization/-optimization of flexible manufacturing systems

Improve manufacturing and supply chain performance and resilience based on balanced and optimized resource consumption (costs, energy, materials, ...)

Introduce human centered systems in advanced manufacturing systems and understand how VR/AR can facilitate production steps.

AUTOMOTIVE | AUTOMATION

STRATEGY HOUSE AUTOMOTIVE / AUTOMATION

VISION STATEMENT 2030

2030

Excellence in automation processes
and innovative technologies
for sustainable manufacturing, automotive and mobility solutions

AUTOMOTIVE & MOBILITY

NOI Techpark facilitates the **development and application of Automotive & Mobility solutions**, especially:

Automotive components and systems

- Off-road mobility solutions
- Connected, Autonomous, Shared, Electric and Lightweight Mobility (CASEL)
- Smart Logistics and supply chains
- Last mile solutions

MANUFACTURING

NOI Techpark facilitates the digital and sustainable transformation of manufacturing companies including: Automation and Robotics

Human Machine Interaction

- Smart factory – Industry 4.0 - IIoT
- Product Engineering & Process development (CAx, XR)
- Production and material technologies
- Predictive Maintenance
- Industrial quality assessment

AGRI-AUTOMATION

NOI Techpark facilitates the **development and application of Agro-Automation solutions**, especially:

- Land and vegetation monitoring
- Product development (CAx, XR)
- Agricultural robots: (pruning, weeding, spraying, irrigation, harvesting)
- Automated food inspection and sorting
- Precision agriculture
- Smart farming and AIoT

EXCELLENCE

PIONEERING

SUSTAINABLE

SPECIALIZATION STRATEGY

GREEN

To be a centre of excellence for the energy transition towards carbon neutrality

ENERGY SYSTEMS

Systems designed to link various components of energy carriers and make one integrated efficiency gain.

SUSTAINABLE BUILDINGS & DISTRICTS

Development and optimisation of solutions for the construction sector through renewable and recyclable resources and materials.

WATER TECHNOLOGIES

Technologies used to enhance, preserve and monitor the quantity and quality of the resource water in a circular way.

EXCELLENCE

PIONEERING

SUSTAINABLE

FOOD & HEALTH

Pioneering food innovation and foster a holistic health approach

RAW MATERIALS & BY-PRODUCTS

High-quality primary and secondary raw materials for high-quality products.

OPTIMAL PROCESSING & FERMENTATION

Processing methods to exploited and preserve valuable ingredients and organoleptic attributes.

OMICS & PRECISION HEALTH

Omics technologies for food and health applications.
All-encompassing Precision Health solutions.

EXCELLENCE

PIONEERING

SUSTAINABLE

DIGITAL

Establish the digital backbone to enable smart green regions

INTERNET OF THINGS (IOT)

Sensors for data collection to tackle new challenges for a sustainable digital environment.

OPEN DATA HUB

The platform to enable accessing and sharing of data, knowledge and algorithms.

ARTIFICIAL INTELLIGENCE (AI)

Technological advances in data processing to improve how users get involved in the customer journey.

EXCELLENCE

PIONEERING

SUSTAINABLE

AUTOMOTIVE AUTOMATION

Excellence in automation processes and innovative technologies for sustainable manufacturing, automotive and mobility solutions

AUTOMOTIVE & MOBILITY

Components and systems for sustainable automotive and mobility solutions.

MANUFACTURING

Technologies to facilitate digital and sustainable transformation in manufacturing companies.

AGRO-AUTOMATION

Technologies for the smart automation in Agriculture.

Technology Transfer

BIDIRECTIONAL TECH & KNOW-HOW TRANSFER

The detached consideration of the innovation cycle "From market to market" suggests a pure market pull process. However, disruptive innovations usually arise from technology push, which usually requires intensive R&D activity. This can be illustrated by the model extended by two further research cycles:

QUALI SERVIZI OFFRIAMO? LA NOSTRA MISSIONE...

KNOW HOW TRANSFER EVENTS

Organizzazione di

- - Convegni
- - Seminari
- - Workshop tematici
- - Webinar
- - Delegazioni

relativo ad argomenti rilevanti e richieste o requisiti specifici

NETWORKING & COOPERATION

- Ricerca di partner tecnologici
- Ricerca di partner accademici
- Coaching tecnologico
- Accompagnamento alla cooperazione fino alla stesura MoU
- Supporto nello sviluppo di progetti di cooperazione
- Gestione di Tavoli di Lavoro e confront

R&D CONSULTANCY

- Analisi dei fabbisogni/pre-assessment
- Scouting tecnologico & Market intelligence
- Identificazione clienti e/o siti pilota
- Supporto nello sviluppo di progetti di innovazione, ricerca e sviluppo
- Segnalazione e supporto nella partecipazione a bandi, contributi o fondi (locale, nazionale e EU)
